Tech Tip Tuesday—September 11, 2018

A Day to Remember

On this September 11 we would like to take a moment to remember all those who perished in the attacks, and their friends and family. It was a day that changed the world, and also had a great impact on our industry. May we never forget, but may it never happen again.

We do hope that all of you had a good summer and are ready for the increased business that most of you experience this time of year.   While the Tech Tip has been quiet over the summer, we have been busy working to improve the features and functions of Livery Coach.

New Research Team

In addition to our talented team of developers led by An Vo, we are pleased to announce that we have also hired a separate R&D team for more projects. This team, which is supervised by a senior university professor and staffed by professors and graduate students in computer science, will be doing a deep dive into new technologies and functions and how they can help Livery Coach.   Their first project is taking our work to date on auto-schedule/auto-dispatch and turning it into the most advanced, sophisticated system in the industry. We will report more as the project progresses.

Fall Shows

Livery Coach is pleased to announce that we will be at both the Chauffeur Driven show in October at National Harbor, MD as well as the LCT East Show in November in Atlantic City. If you make it to a show, please stop by!

New Logo

We are also pleased to announce that we have a new logo! When our old logo was introduced, it was the perfect way to highlight the fact that Livery Coach was the first Windows based transportation software solution on the market. But that was a long time ago!

While the Livery Coach system has become vastly more powerful, capable, and sophisticated, the old logo has become more and more…dated?

Our new logo (shown below) will gradually replace the old one over the next few months as we make updates. We hope you like it!
